

SPINAL DECOMPRESSION THERAPY SYSTEM

Spinal Decompression Therapy is used to treat Disc syndrome or Spinal Degeneration. It involves stretching the spine using a motorized traction table to relieve back pain, leg pain and neck pain caused due to spinal degeneration without any surgical procedure. Decompression therapy is considered as a safest and leading method to treat Disc syndrome than invasive procedures. Medical Systems Offer the Latest addition to its family of physiotherapy equipment, The SPINETRAC which is a state of art Decompression Therapy System.

ORDERING DETAILS

CODE:	DESCRIPTION
HM-DTS100	Spinal Decompression Therapy System
